The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/730,250	Applicant(s) CARTER-SMITH ET AL.	
	Examiner Michael G. Mendoza	Art Unit 3734	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see page 4 or the arguments, filed 7/27/2007, with respect to the rejection(s) of claim(s) 1 under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Hirano JP 11028242.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6, 8, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hirano JP 11028242.
4. Hirano teaches an acupressure ring comprising: two or more rings having a visual indicator visible when the ring are worn and a projection extending inwardly from an inner surface of the acupressure ring, the projection being approximately orthogonal to a visual indicator, wherein the visual indicator is provided by a break in the acupressure ring; wherein the projection has a mid-point, which is approximately 90 degrees around the acupressure ring from the mid-point of the visual indicator; the cross section of the projection is round, cylindrical, conical, square or rectangular; wherein the projection is a single projection (Embodiment of fig. 3 shows holes 1b that

can be used to place the projection 2 in multiple positions including orthogonal to the visual indicator. Also as translated by the abstract, the projection can be provided with a slide mechanism so that the position of the projection 2 attached to the ring can be varied.); and wherein the acupuncture ring is comprised of two rings; wherein a bridging member connects each one of the rings.

5. Hirano discloses the claimed invention except for the specifics of the rings being sized to be worn closely around the finger of a user. However, it would have been obvious to one having ordinary skill in the art to modify the size of Hirano to be used with any part of the body.

6. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hirano.

7. Hirano discloses the claimed invention except for the recited distance values. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the recited ranges, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.
